

Takasur Azeem

Senior iOS Engineer — (502) 442-8429 — takasurazeem@gmail.com — Louisville, KY

LinkedIn: takasur-azeem GitHub: takasurazeem

Summary:

- Software Engineer with 8+ years of experience building iOS and watchOS products across weather technology, healthcare, and enterprise software, specializing in real-time systems, server-driven UI, customer onboarding, telehealth platforms, and AI-assisted engineering workflows.
- Delivered production features in fast-moving client environments using Swift, SwiftUI, UIKit, MVVM, TCA, and modular architecture.

Technical Skills:

Mobile Development:	Swift 6, SwiftUI, UIKit, iOS 16-26, watchOS, ActivityKit, StoreKit, Core Data, Server-Driven UI
Architecture:	MVVM, TCA, Modular Architecture, Clean Code, Reusable Components
AI & Automation:	AI Agent Orchestration, MCP (Model Context Protocol), Prompt Engineering, Fastlane, CI/CD
Tools & Platforms:	Xcode 26, Git, Firebase, REST APIs, Proxyman, Postman
Testing & Quality:	Unit Testing, UI Testing, Debugging, Performance Optimization, Test-Flight Release Support
Collaboration:	Agile/Scrum, Cross-Functional Communication, Product Collaboration, Mentorship

Education:

- Graduate coursework in Software Engineering, IIU Islamabad, Pakistan (2021)
- BS in Information Technology, University of Sargodha, Pakistan (2017)

Selected Accomplishments:

- Shipped 90+ production PRs for The Weather Channel ecosystem (416M+ users), delivering real-time and server-driven features across iOS, iPadOS, and watchOS.
- Architected the Real-Time Rain Live Activities system and delivered the watchOS companion app as the primary developer using AI-assisted workflows.
- Improved app quality and user experience by reducing loading time by 40%, decreasing crash rates by 35%, and increasing user ratings by 20%.
- Built AI agent infrastructure with 7 specialized skills, reducing engineering context overhead by 65% (49KB to 17.5KB).
- At SemangiX, delivered 50+ client projects from requirements through release, helping scale products from hundreds to 10,000+ users.

Professional Experience:

The Weather Channel, Atlanta, GA

August 2022 - Present

Role: Software Engineer

Industry: Weather Forecasting & Enterprise Solutions

Project Summary:

- Architected and maintained three mission-critical applications serving 416M+ users: The Weather Channel app (primary consumer app), Storm Radar (specialized severe weather tracking), and Wunderground (weather data platform).

- Engineered real-time infrastructure including Live Activities system, watchOS companion app, and server-driven architecture patterns across iOS, iPadOS, and watchOS platforms.

Responsibilities:

- **The Weather Channel app:** Architected and implemented the initial onboarding flow, then led a complete rewrite to improve conversion and maintainability.
- Engineered the real-time Rain Live Activities system, shipped pull-to-refresh functionality, and optimized app performance to reduce load times by 40% and crash rates by 35%.
- Sole developer of the live watchOS companion app, built and shipped using AI-assisted development workflows.
- **Storm Radar app:** Dramatically improved code health by reducing build warnings from 2,000+ to fewer than 10; led complete app redesign; implemented analytics integration across Amplitude, mParticle, Braze, and RevenueCat; built beta experience and push notification system.
- Led 4 major customer onboarding components with fail-safe mechanisms, collaborating with a cross-functional team of 12 engineers and designers to streamline premium conversion flow.

Tools Utilized: Swift, Objective-C, iOS, iPadOS, watchOS, Real-Time APIs, Live Activities, Server-Driven UI, Amplitude, mParticle, Braze, RevenueCat, Claude Code, Git

CareCloud, Dayton, OH

July 2021 - August 2022

Roles: iOS Developer (Jul 2021 - Jan 2022) / Software Engineer (Jan 2022 - Aug 2022)

Industry: Healthcare Software & Revenue Cycle Management

Project Summary:

- Served as primary developer on BREEZE Practice app, a modern iOS application for 40,000+ healthcare providers across the US healthcare ecosystem.
- Engineered a critical authentication integration allowing users from legacy talkEHR platform to seamlessly transition and authenticate within BREEZE Practice while maintaining backward compatibility.
- Architected modular code reusable across BREEZE Practice and BREEZE Patient apps via shared Git submodules, reducing duplication and improving maintainability across the product suite.
- Improved build infrastructure and deployment pipelines using Fastlane and continuous integration systems to streamline QA distribution.

Responsibilities:

- **iOS Developer (Jul 2021 - Jan 2022):** Developed, tested, and maintained native iOS features using Swift and UIKit; consumed RESTful APIs with JSON parsing for data population; collaborated with cross-functional teams on code reviews and performance optimization; utilized Git and Jira within agile sprint planning framework.
- **Software Engineer (Jan 2022 - Aug 2022):** Architected and implemented an authentication module enabling legacy app users to log in to a modernized iOS application; engineered backend system integration to unify disparate systems; championed Test-Driven Development (TDD) implementation; established SonarQube code analysis tools and Fastlane automated build distribution to QA.

Tools Utilized: Swift, Objective-C, UIKit, SwiftUI, iOS, Xcode, RESTful APIs, JSON, Git, GitHub, Jira, Fastlane, SonarQube, Travis-CI, Microsoft AppCenter, CoreData, MVC, MVVM, Composable Architecture, Test-Driven Development (TDD), Agile Methodology

SemangiX, Gujranwala, Punjab

March 2020 - June 2021

Role: Software Engineer

Industry: IT Services & Custom Software Solutions

Project Summary:

- Led delivery of high-impact client projects, increasing annual revenue by 30% and improving API performance by 20%.
- Executed 50+ end-to-end software initiatives by translating business requirements into production-ready implementations.
- Scaled platform adoption from hundreds to 10,000+ users through automation and reliability-focused engineering practices.

Responsibilities:

- Collaborated with Web, Android, Design, and backend teams to reduce feature integration time by 30%.
- Improved build workflows by introducing target-level project organization, reducing build time by 25%.
- Managed full delivery lifecycle from requirements analysis through deployment and support.

Tools Utilized: Swift, Xcode, REST APIs, Git, Agile Delivery, Project Management

Early Career**2017 - 2020**

iOS development, technical consulting, and instructional roles across multiple firms.
